ACADEMIC PROJECTS

➢
Project Name : Securing On Demand Source Routing in Mobile Ad-hoc Networks by vampire Attacks.

Abstract: A mobile ad-hoc network (MANET) is a kind of wireless networks which is infrastructure less and adaptive in nature. Vampire attacks is the type of resource depletion attacks in which a malicious node create and send the message with node. Vampire attacks choose the longest path and loss the battery power. We can reduce the vampire attacks with the help of clustering technique. Clustering is the process that divided the network into

interconnected substructures called clusters. To analyze and performance of the ad-hoc network in the presence and absence of vampire attacks by using network simulator 2(ns2).
